Strategic research profiles

New profile:
The Sea

Celebrations 2018

- More than a hundred events during the year
- History - an edited book about the history of Åbo Akademi University, traditions and parties
- Today – open house, seminars, programme integrated into the everyday life at the university
- Future – Seminar on the future of universities

Imagine! Science, knowledge, and wisdom in the university of the future

- We want to imagine
- how the university of the future might be embedded in society in novel and surprising ways.
- the coming progress of science, and the ways in which might change the way we see life and our place in the universe.
- a world where data and information are omni-present, and the role universities have in such a world.
- a society without current institutional boundaries for knowledge-production, even if it challenges our idea of the university.
- a world in which embodied, aesthetic and dispersed knowledge is seen as valid and worthwhile.
- futures for indigenous knowledge systems and minority viewpoints.
- a future for wisdom.
- challenges to and futures for expert knowledge, and future politics for knowledge in general.

Välkommen att fira ÅA100!
